Yeqing Yan	yyan1@mail.sfsu.edu
Roseanne Damasco	rdamasco@mail.sfsu.edu
Marina Voronovskaya	marishka@mail.sfsu.edu

1. Summary of the feedback

- Overall look-&-feel is simple and good
- Search functionality is working fine.
- Host/hostess page is looking good.
- M2 document and database is up-to-date.
- Need to change header styling for 'Welcome guest' title.
- On home page, search bar textbox is enough, no need to provide additional filters there. Additional filters like number of people, date and time can be applied on search results page.
- The dropdowns and calendar is not looking proper.
- Change the header to include 'about' and 'restaurant owner' link and put everyone's portfolio. Remove 'Help' and 'Home' link from header. Login and sign up would be on side.
- On search results page, no need to define additional filters. Date, time and number of people are enough. It should have same search bar with search query populated. Each images of restaurant is clickable which goes to restaurant profile page. No 'view details' button required.
- Add more comments in code and use descriptive commit messages in SVN.
- Let the user specify date and time, no defaults required.
- Restaurant owner page – Field validations required. Mark (*) for mandatory fields. Use 'Restaurant Image' instead of word 'Thumbnail'.

2. Priority 1 functionality

Guest:

1. Guest shall be able to search restaurants by location or restaurant name.
2. Guest shall be able to view details pertaining to a restaurant like address, hours, images and reviews.
3. Guest shall be able to reserve a table of a restaurant by specifying number of people and date & time.
4. Guest shall have option to register.

Registered Guest:

5. Registered guest shall have all the facilities of guest.
6. Registered guest shall be able to submit reviews for the restaurant he/she has reserved and visited.

Restaurant Owner:

7. Restaurant owner shall be able to upload restaurant image.
8. Restaurant owner shall be able to provide restaurant's useful information like address, phone number, hours, tables etc.

Host:

9. Host shall be able to view/cancel the reservation
10. Host shall be able to filter information by time.

Admin:

11. Admin shall have different link to login.
12. Admin shall be able to view and approve/reject restaurant content on the website.

3. Team

Name	Role
Rujoota Shah	Team Lead, Integration & code reviewer
Yeqing Yan	Tech Lead, SVN manager, QA
Marina Voronovskaya	Front end developer, UI designer
Ishwari Shevade	Front end developer, QA
Swati Patel	Back end developer, database manager
Roseanne Damasco	Front end developer, document reviewer
